## 05. Analysis & Modelling

### NATIONAL ENERGY SYSTEMS | UTILITY SECTOR

GreenLead provides the utility sector consultancy services regarding business analysis, with pricing, connection terms, backup obligations, standby costs, peak load alleviation, segmentation of consumer types, the introduction of new technology in utility, and much more.

We have worked to create a national framework for energy supply and energy planning for the whole of Greenland. A huge country the size of half of Europe and with relatively many facilities compared to the size of the population.

We have designed national price systems, national standard terms of supply for electricity, water, and heat, connection conditions, specified requirements concerning backup, and much more. We have drawn up the national plan to convert Greenland's remaining diesel power to renewable energy, where we have been the idea creators and driving force behind the adoption of legislation and financing package of DKK 3.1 billion. DKK for the construction of two new large hydropower plants.

## We are guiding the green energy transition

Our goal is to help the green transition move forward by changing companies' strategies on green energy.

GreenLead is a consultancy company experienced:

- Green energy transition
- Technologies such as hydropower, solar, and wind
- Project development
- Energy systems
- Operation of utility companies

We have worked together across a multitude of projects combining our areas of competence and have found that we complement each other very well. We hope that we can use this for you and your company.

The company is based on a philosophy that emphasizes trust, sustainability, orderliness, and results that are achieved through relationships and structure.
